

Guillermo Franco Borjón *Senior Full-Stack Developer*

✉ fra.borjon@gmail.com ☎ +52 477 272 4576 📍 León, Gto.

🌐 linkedin.com/in/guillermo-franco-borjon 🔄 github.com/devMetalG

Senior Full-Stack Developer experienced in building, modernizing, and maintaining complex enterprise applications using **Vue, Nuxt, NestJS, TypeScript, PostgreSQL, and Redis**. Strong background in **technical leadership, real-time systems, frontend architecture, backend development, authentication and authorization, automated testing, CI/CD, performance optimization, and UX design**.

EXPERIENCE

AETO, Senior Developer | Full-Stack / Technical Leadership 03/2025 – Present | Remote

- Lead the development of a **real-time enterprise collaboration and work-management platform** built with Vue, Nuxt, TypeScript, and WebSockets, supporting messaging, Kanban boards, task lists, calendars, advanced filters, bulk task operations, role-based permissions, and live notifications.
- Drive technical decisions across a **7-developer team**, performing code reviews, mentoring junior developers, distributing tasks, defining implementation approaches, and establishing development conventions across shared modules.
- Own business-critical modules designed and implemented from the ground up, acting as the primary technical owner for troubleshooting, maintenance, production support, and continuous improvement.
- Define frontend architecture for the Vue/Nuxt ecosystem, including project structure, reusable components, composables, Pinia state management, API integration patterns, route middleware, dynamic forms, permissions, and complex filtering workflows.
- Led the migration of a large-scale enterprise platform from **React/Next.js to Vue/Nuxt**, covering **2,460+ core features and 41 primary user interfaces** while maintaining uninterrupted operations and data integrity throughout the transition.
- Architect and maintain **NestJS backend services** involving JWT authentication, guards, RBAC, Prisma ORM, PostgreSQL, Redis, queues, scheduled jobs, REST APIs, and automated PDF generation, including services responsible for **1,000+ sensitive reports per month**.
- Improve application performance through HTTP request optimization, caching, lazy loading, pagination, rendering improvements, and large-table optimization, reducing API communication latency by approximately **18%** compared with the legacy platform.
- Implement automated **E2E testing with Playwright** and GitHub Actions quality gates that prevent pull-request approval when automated validations fail.
- Design and propose UX workflows through structured mockups and centralized design specifications, contributing to a **40% reduction in user errors** across workflows serving **800+ internal and external users**.
- Integrate enterprise applications with external APIs, hardware devices, mapping services, email providers, object storage, and customer-specific data sources, while working with Docker, Vercel, Cloudflare, and S3-compatible storage.

So-far, Full-Stack Developer 01/2024 – 02/2025 | León, Gto

- Developed Full-Stack solutions for a **Human Capital Management platform used by 500+ employees**, using C#, SQL Server, Flutter, and supporting web technologies.
- Designed and developed a mobile employee attendance solution using **Flutter**, integrating facial recognition and location-based verification for personnel tracking and attendance validation.
- Led UX/UI improvements that simplified a critical HR registration workflow from **8 steps to 3** and refactored legacy interfaces, reducing estimated process completion time by approximately **30%**.
- Designed and optimized SQL Server stored procedures for high-volume reporting workflows, improving report execution speed by approximately **25%**.

AETO, Front-End Developer 06/2020 – 12/2023 | Remote

- Developed and maintained **30+ reusable and responsive UI modules** across multiple client applications using JavaScript, Alpine.js, HTML, and CSS.

- Introduced reusable frontend patterns and user-centered design practices that improved visual consistency and reduced duplicated implementation work across applications.
- Standardized development workflows for a 5-person team through Gitflow practices, improving branch organization, collaboration, and deployment consistency while reducing merge conflicts.

INDEPENDENT PROJECT

Forge Finance — Personal Finance Platform, Full-Stack / Mobile Developer — In Development

Nuxt · NestJS · Flutter · PostgreSQL · Redis · TypeORM · JWT · Docker

Building a personal finance platform designed to automatically capture, process, and consolidate financial transactions from multiple institutions into a unified financial view.

- Designed a modular Full-Stack architecture using **NestJS, PostgreSQL, TypeORM, Redis, Nuxt, and Flutter**, separating ingestion, parsing, normalization, matching, and transaction management.
- Designed authentication and authorization flows using **JWT, refresh tokens, Redis-based token invalidation, guards, and role-based access control**.
- Designed an event-processing architecture for financial data ingestion, normalization, matching, idempotency, and duplicate prevention across multiple transaction sources.
- Implemented asynchronous transaction processing using **queues and background workers**, decoupling ingestion workloads from normalization and transaction processing.
- Designed relational schemas for raw capture events, normalized transaction events, financial transactions, and associated metadata while applying validation and access controls for sensitive financial information.
- Follow a **Specification-Driven Development (SDD)** workflow using Claude Code, OpenAI Codex, MCP integrations, reusable skills, and specialized agents for orchestration, requirement clarification, implementation, and complexity-based task routing.

TECHNICAL SKILLS

Languages

TypeScript, JavaScript, C#, SQL

Backend

NestJS, Node.js, REST APIs, WebSockets, JWT Authentication, Guards, RBAC, Background Jobs, Queues, Cron Jobs

Mobile

Flutter, Facial Recognition Integration, Geolocation

DevOps & Infrastructure

Docker, GitHub Actions, CI/CD, Vercel, Cloudflare, S3-Compatible Object Storage

Software Engineering

System Design, Frontend Architecture, API Design, Real-Time Systems, Performance Optimization, Caching, Pagination, Lazy Loading, Role-Based Access Control

AI-Assisted Engineering

Claude Code, OpenAI Codex, MCP, Specification-Driven Development (SDD), AI Agents, Agent Orchestration, Skills

Frontend

Vue.js, Nuxt.js, React, Next.js, Pinia, Nuxt UI, HTML, CSS, Responsive Design

Databases & Data

PostgreSQL, SQL Server, Prisma ORM, TypeORM, Redis, Stored Procedures, Relational Data Modeling

Testing & Quality

Playwright, End-to-End Testing, Automated Testing, Code Reviews

Git & Development Workflow

Git, Gitflow, Pull Requests, Release Branches, Conventional Commits, Versioning Strategies

Product & UX

UX Flow Design, Interface Prototyping, Design Specifications, User-Centered Design

EDUCATION

UNITEC, BS in Computer Systems Engineering

08/2018 – 12/2022 | León, Gto.
